Solomon Cady Hollister, 1891-1982.
Papers, 1904-[1915-1982].

Reading Room copy

16/2/2077

1) NYCV84-A1485
Hollister, Solomon C. (Solomon Cady), 1891-1982.
Papers, 1904-1982, 1915-1982(bulk)
105.8 cubic ft.

Dean of the College of Engineering, professor of civil engineering.
Summary: The papers of Solomon Cady Hollister include correspondence, typescripts, reports, drafts, publications, engineering studies, specifications and computations, blueprints, photographs, tape recordings, slides, and movie films concerning Hollister's work as a civil engineer prior to his academic career, his affiliations with the American Society of Civil Engineers, the American Society of Mechanical Engineering, the American Welding Society, the American Society for Engineering Education, the American Society for Testing Materials, the American Council on Education, the Engineers' Council for Professional Development and other professional and corporate organizations, and his work as a professional consultant to several companies, including Raymond International, Firestone, Detroit Edison, and Babcock and Wilcox on such projects as the Boulder Dam penstocks; his directorship of the College of the Sibley College of Civil Engineering at Cornell University from 1934 to 1937, and deanship of the College of Engineering from 1937 to 1959, particularly regarding the expansion and development of the curriculum and the engineering campus, and the relationship of the College of Engineering with professional engineering societies and corporations; Hollister's service on government panels and boards of directors, including Raymond International.

Also, publications and speeches by Hollister on engineering education, the role of government, and other topics; and Hollister's personal interests, including paleontology, the design of sports equipment, and the study of unusual concrete structures. Correspondents include Bancroft Gherardi, Victor Emanuel, Vladimir Karapetoff, Franklin Olin, Henri S. Sack, Maxwell M. Upson, Alexander M. Beebe, Herbert Hoover, and Fritz Leonhardt.

Indexes: Unpublished guide with index.

Biographical Note

Solomon Cady Hollister, 1891-1982.

Solomon Cady Hollister was born in Crystal Falls, Michigan on 4 August 1891. He began his studies at Washington State College and continued at the University of Wisconsin, where he received the B.S. in Civil Engineering in 1916 and the C.E. in 1932. He also held honorary degrees from Stevens Institute of Technology, the University of Wisconsin, Purdue, and Lehigh. He served as an instructor in mechanics at the University of Illinois in 1916 and was a research engineer for the Corrugated Bar Company of Buffalo, New York in 1917. During World War I, he was Chief Design Engineer and head of the Research Branch of the Concrete Ship Section of the United States Shipping Board. In this capacity he supervised the construction of the first practical seagoing concrete ships and barges, the design of which was used for over one hundred ships deployed during World War II.

Throughout the 1920s, Hollister was a consulting engineer in Philadelphia, and also served as a member of the Executive Committee of the Structural Division of the American Society of Civil Engineers. The design of a skew-arch bridge in Chester, Pennsylvania won him the Wason Research Medal in 1929. In 1930 he became Professor of Structural Engineering and Assistant Director of the Materials Testing Laboratory at Purdue. There he conducted research on transit-mixed concrete and developed the photoelastic methods of stress analysis that became the basis of modern concrete mixing specifications. From 1932-36 he served as consultant to the Babcock and Wilcox Company on the thirty-foot-diameter welded penstocks at Hoover Dam, which are perhaps the principal expression of his outstanding accomplishment in the field of civil engineering. For Babcock and Wilcox he was also a consultant on pressure vessels and atomic reactor vessels.

In 1934 Cornell University appointed him Director of the School of Civil Engineering; in 1937 he was elected Dean of the College of Engineering. As Dean, he conceived and developed the university's new engineering campus of ten buildings, changed the curriculum, inaugurated a Five-Year undergraduate engineering degree program (1946-64), increased the size and quality of the faculty and the student body, revitalized the College's research efforts, and negotiated the gift of the Curtiss-Wright Research Laboratory to Cornell and supervised its transfer to the university. In 1946-47 he was also a Vice-President of Cornell. In 1959, he retired from the deanship and became a trustee of the university; that same year, Hollister Hall was dedicated and named in his honor.

Hollister served as a consultant to many corporations, including Firestone, Babcock and Wilcox Company, and John Wiley

and Sons, and was elected to the Board of Directors of the Raymond Concrete Pile Company (later Raymond International). He wrote numerous technological articles, contributed to handbooks, and published widely in the field of engineering.

Hollister was a foremost advocate of strengthening the engineering profession by the advancement of engineering education and served as president of the American Society for Engineering Education in 1951-52. He chaired the Education Committee of the Engineers' Council For Professional Development and served on various commissions and committees concerned with the improvement of the profession. For this work he was awarded the Lamme Medal in 1952.

Throughout the 1950s, Hollister served on several commissions and boards, including the Hoover Commission on the Organization of the Executive Branch of the Federal Government, the Advisory Council of the United States Signal Corps, the Board of Consultants on Isthmian Canal Studies, and the National Academy of Sciences - National Research Council Committee for the Study of Africa South of the Sahara.

Throughout his career, Hollister was a member of the American Society of Civil Engineers, served as a regional director, and was elected to a life membership. Other notable professional technical societies and organizations of which he was a member include the Column Research Council, the American Society of Mechanical Engineers, the American Society for Testing Materials, and the American Concrete Institute.

Hollister's varied avocations included photography, painting, and sculpture. He also patented an innovative athletic shoe. As a Trustee and past President of the Paleontological Research Institute and as a longtime collector of sea shells, Hollister contributed many scientific papers to the literature of this field, publishing in 1958 a monograph on the two genera of fossil shells he had classified.

Hollister died in Ithaca, New York, in 1982.

Provenance

Hollister's files of his work prior to coming to Cornell (Series I), as Director of the School of Engineering from 1935 to 1937 (Series II), and as Dean of the College of Engineering from 1937 to 1959 (Series III), arrived in the Department of Manuscripts and University Archives from the Dean's Office in Carpenter Hall in 1982. Some additional material arrived between 1983 and 1987 and was interfiled within Series I, II, and III. Blueprints, tape recordings, and other forms of material were removed during processing and became parts of Series V. Dean Hollister's personal papers (Series IV) arrived in 1982 from his office in Hollister Hall and in 1984 from his home.

The papers have been processed into four series which reflect major periods in Hollister's life, and one series containing blueprints and visual materials.

Removed from the collection were five boxes of student grade and course cards, books which were distributed to other departments, and a pair of football shoes of Hollister's design which were transferred to the Department of Athletics.

P. McCray
19 February 1988

Collection Description

The papers of Solomon Cady Hollister include correspondence, typescripts, reports, drafts, publications, engineering studies, specifications and computations, blueprints, photographs, tape recordings, slides, and movie films concerning Hollister's work as a civil engineer prior to his academic career, his affiliations with professional engineering societies, and his work as a professional consultant to several companies including Babcock and Wilcox on such projects as the Boulder Dam penstocks, bridges, and concrete ships; his directorship of the Sibley College of Civil Engineering at Cornell University from 1934 to 1937, and deanship of the College of Engineering from 1937 to 1959, particularly regarding the expansion and development of the curriculum and the engineering campus, and the relationship of the College of Engineering with professional engineering societies and corporations; Hollister's service on government panels and advisory boards, including the Hoover Commission of 1953-55; his service on boards of directors, including Raymond International; publications and speeches by Hollister on engineering education, the upgrading of the engineering profession, the role of government, and other topics; Hollister's personal interests, including paleontology, the design of sports equipment, and the study of unusual concrete structures.

Series Descriptions

SERIES I: Consulting and Academic Work Prior to Cornell, 1930-34. Boxes 1-4.

Articles, reports, engineering studies, computations, and correspondence relating to civil engineering, structures, concrete, and stresses, and to engineering questions particularly interesting to Hollister such as dust devils, unusual concrete structures, and the Plougastel and Golden Gate Bridges; correspondence regarding the American Society of Civil Engineers and other professional organizations; civil engineering lecture notes; manuscripts and typescripts of articles by Hollister; and some personal material.

SERIES II: Director, Sibley College of Civil Engineering at Cornell, 1934-37. Boxes 5-6.

Reports, engineering studies, and data pertaining to civil engineering, welding, and bridges; correspondence with corporations, institutes, and individuals, including the American Society of Civil Engineers, the American Society of Mechanical Engineering, and the American Welding Society; correspondence concerning Hollister's professional consulting; and a small amount of material relating to the School of Civil Engineering at Cornell.

SERIES III: Dean, College of Engineering at Cornell.

Subseries 1: 1937-1949. Boxes 7-36.

Subseries 2: 1950-1959. Boxes 37-54.

Correspondence, reports, and studies concerning the Hollister deanship of the College of Engineering and the schools and departments of the College of Engineering, particularly regarding the "New Building Program," the planning for and construction of Olin, Kimball and Thurston Halls, the High Voltage Laboratory, the Materials and Metallurgical Laboratory; the College of Engineering budget and inventories; curricula; the Five-Year Engineering School; the Division of Basic Studies; faculty, staff, students, and enrollment; the McMullen and other scholarships; the Policy Committee of the College of Engineering, the Engineering College Council, the Engineering Development Program, and other academic committees; the "Dean's Letters"; the Cornell Society of Engineers; the Cornell Aeronautical Laboratory; the Fuertes Memorial Contest; the Thurston Centennial; the Curtiss-Wright Cadette Program, ROTC,

the Navy College Training Program, and the role of the College of Engineering in World War II and national defense; corporate relations, particularly the relationship of the College of Engineering with Firestone, Westinghouse, Consolidated Edison, Shreve, Lamb, and Harmon, and John Wiley and Sons; correspondence with the American Concrete Institute, the American Iron and Steel Institute, the American Society of Civil Engineers, the American Society for Testing Materials, the American Welding Society, the American Council on Education, the Engineers' Council for Professional Development, the U.S. Army Engineers, the U.S. Navy, the U.S. Naval Reserve, the Association of Land-Grant Colleges, the American Society for Engineering Education (formerly the Society for the Promotion of Engineering Education); data, reports and articles relating to questions of civil engineering, concrete, structures, and concrete ships; articles, manuscripts and typescripts concerning research projects, and the shortage of engineers.

Subseries 3: 1904-1979. Boxes 55-59.

Papers relating to the Dean's Office in the form of correspondence and minutes of the Policy Committee of the College of Engineering (1950), the Engineering Development Program (1958-59), the College of Engineering Budget (1904-62), and miscellaneous topics (1911-39).

Correspondents include Bancroft Gherardi, Victor Emanuel, Vladimir Karapetoff, Franklin W. Olin, Henri S. Sack, and Maxwell M. Upson.

SERIES IV: Personal Papers and Consulting Records, c. 1930-1970s.
Boxes 59-98.

Correspondence regarding Hollister's professional consulting, including reports, photographs, specifications, blueprints, and test reports; correspondence concerning Hollister's service on the Hoover Commission of 1953-55 on the Organization of the Federal Government; correspondence with the Column Research Council; manuscripts and typescripts of essays, publications and speeches by Hollister concerning the engineering profession, the Panama Canal, the relationship between public and private power, the role of the engineer in society, and other topics; articles, press clippings, publications, and correspondence concerning Hollister's interest in concrete bridges, the Panama Canal, sea shells, athletic equipment, wind, Boulder Dam, concrete ships, the Cornell University Centennial, the manpower shortage, the shortage of engineers, the question of government control of water and power, and other subjects.

Hollister's personal papers include family documents and correspondence; material on investments, inventions, and patents; photographs; items regarding the Island Inn, Sanibel Island Florida; one tape recording and twelve cassettes of Hollister's reminiscences of the College of Engineering, his professional consulting, and his childhood; and correspondence concerning the welfare of Cornell University. Agencies, organizations, and councils include the American Welding Society, the American Welding Society Welding Research Committee, the Column Research Council, the American Society for Testing Materials, the American Society of Civil Engineers, the American Society of Mechanical Engineers, the Railway Engineering Association, the Engineers' Council for Professional Development, the United States Maritime Commission, the United States Navy, the United States Coast Guard, the United States Signal Corps, the Paleontological Research Institute, Cosmopolitan Club International, the Commission on the Organization of the Executive Branch of the Federal Government (popularly known as the Hoover Commission), Babcock and Wilcox Company, Raymond International and the Raymond Concrete Pile Company, Firestone, Shaw-Box Crane and Hoist, Sun Oil, and Detroit Edison; at Cornell the School of Engineering, the Cornell Aeronautical Laboratory, and the University Board of Trustees. The series also includes a separate correspondence file of recommendations and evaluations of personnel.

Correspondents include Alexander M. Beebe, Maxwell Upson, Herbert Hoover, and Fritz Leonhardt.

SERIES V: Blueprints and Visual Material, 1930s-70s.
Boxes 99-105.

Blueprints pertaining to the College of Engineering, and to Hollister's professional consulting practice and personal interests; slides pertaining to the Isthmian Canal Studies and other engineering questions; films concerning various engineering questions and the Cornell Report on Engineering Development; drawings and charts of Cornell buildings; miscellaneous photographs of buildings and laboratories of the College of Engineering from various periods.
