TRUMP, EDWARD NEEDLES, ('78), 1857-1944, and CHARLES CROASDALE TRUMP, (B.A. '08 Harvard University; M.E. '11, Cornell University), 1886-1957. Papers, 1876-[1881-1956]; 3.5 cu. ft. Include letters from Edward N. Trump to his father, Charles Newbold Trump (1881-1898); correspondence between Charles C. Trump and his sons, Peter Bulley Trump and Charles Edward Trump (1942-1956), his wife Rachael Bulley Trump and his sister, Marjorie Trump; correspondence and legal documents related to the estate of Edward N. Trump (1944-1946), correspondence and financial documents related to Edward N. Trump's management of the affairs of his Aunt Marie Louise and her husband Charles A. Lasar while they were in Europe (1902-1930). Also included are genealogical records, photographs, clippings, ephemeral material, legal and financial documents including income tax and banking records, and personal documents. Business papers are related to the Trump's investments, development of patents and employment with companies including the Solvay Process Co. (1885-1936); the Dolomite Marine Corp. (1934-1941); the Sanitary Metal Cap Corp. (1935-1938); Marco Co., Inc. (1940-1943); and the F. C. Haub Co. (1951-1954) and include, in addition to correspondence, photographs, drawings, speeches, patents, notebooks, blueprints, and articles. (2869)

Professional Vitae of Edward Needles Trump

- Nov. 9, 1857 born in Philadelphia, Pa.
- 1872-1876 apprenticed as a machinist, Trump Bros. Machine Co.
- 1876-1878 Cornell University Mechanical Engineering Course.
- 1879-1882 built and operated one of the first plants for the
manufacture of sugar beets at Delaware Beet Sugar Co.,
Wilmington, Del.
- 1882 was appointed chief engineer of the Solvay Process Co.
built and began operation of the first plant to make soda
ash in the U. S. in 1884.
- 1885 visited Europe with F. R. Hazard
- 1888 enlarged the Solvay plant and was appointed general
manager in addition to chief engineer
- 1890-1893 Designed one of the first rotary furnaces for making portland
cement from marl and clay and operated the plant by direction
of the superintendant until it burned down. Designed and built
first plant in the United States to purify bauxite and make alumina for the
Pittsburgh Reduction Co., afterwards the Aluminum Company of America.

During the next thirty years as General Manager and Chief Engineer and Vice President of the Solvay Process Co. he built and enlarged plant at Detroit, Hutchinson and Amherstburg, Canada. Developed the manufacture of caustic soda, bicarbonate and modified sodas and all of the products now made by the Solvay Process Co. Because of the difficulty in getting enough ammonia he installed a Semet Solvay coke oven plant at Syracuse. The Semet Solvay Co. was formed and as General Manager and Chief Engineer of that company there were built some ten large by-product coke plants furnishing gas to their city, coke to iron furnace plants and the process for the recovery of benzol, and ammonia with methods of distillation and condensing of ammonia liquors for the use in soda ash plants. Many improvements in the coke company, gas refining and handling plants were made and picric acid and other explosives were made during the 1914-1918 war.

After 1918 he was consulting engineer and helped to build up the process for making synthetic ammonia, the first successful plant after the United States government had failed in No. 1 plant at Sheffield. He also helped design and build the Hopewell, Virginia plant for synthetic ammonia and nitrate of soda which is now the largest in the country.
