George Biddle Kelley
FOR DEGREE OF CIVIL ENGINEER

COLLEGE OF CIVIL ENGINEERING
CORNELL UNIVERSITY

PREFACE.

In presenting this Thesis, it is my aim to try and solve a problem in Sewage Design, which presents many peculiar features. The subject was contemplated before entering Cornell, and before the town in question had put in a system. It has been my aim throughout the Design to work for economy and still make the system adequate to meet the demand which would be put upon it both now and in the future. Although the Thesis may not cover the ground as satisfactorily as I would like to have it, I feel that I have put good, conscientious work upon it, and have done the best that I could, which is all that can be expected of any man.

Before beginning the Design, I wish to extend my thanks to Messrs. Knight and Hopkins, Engineers of Rome, N. Y., who very kindly loaned me the map of the town; to Mr. L. C. B. Anderson, an instructor in the University, who having made a survey of the town of Saugerties, was able to give me much valuable information about the place; to Mr. W. F. Winchell, late Superintendent of Sewers of Saugerties, who kindly showed me around the town upon a recent visit of mine, and who also assisted me in getting data about the population.

Last, but not least, I wish to express my deep appreciation to Prof. Ogden of Cornell, under whose charge my thesis was taken, for his kind assistance in giving advice to me about certain points in the Design, and also for his encouragement throughout the work.
